

FAST CHARGE APPLICATION

CHANGING BATTERIES IS A THING OF THE PAST

Charge your batteries during coffee and lunch breaks with a smart charger designed for fast charging. This method can supply enough energy capacity to work up to three shifts, 6 days out of 7!

OPERATOR RESPONSIBILITIES

CHARGING DISCIPLINE

WATER FILLING

VIGILANCE

WHEN? DO YOU CHARGE?

As soon as the forklift is on standby, its battery can be connected to a fast charging station. Leave it connected during the weekly equalize cycle.

LUNCH BREAKS

COFFEE BREAKS

DOWNTIME

BEFORE! DISCONNECTING!

IMPORTANT! Never disconnect the battery while the charger is working.

IN CASE OF EMERGENCY, stop the charger by pressing "UP" for 2 seconds.

WHEN? TO PUT WATER

Only after an equalization charge. If you do not have an automatic filling system, fill each cell from 1/4" to 1/2" above the plates with distilled water.

AFTER EQUALIZING

1/4"-1/2"

Vigilant operators that are proactive at the various operation tasks greatly contribute not only to their own health and safety, but also to assure that equipments function optimally and don't wear prematurely. Simply being on the lookout for anomalies (excess heat and dust, water spills) can prevent bodily damage or even major equipment failure.
